

You prognosticate already by operating equipment and planning maintenance – why not get decision support from your data?

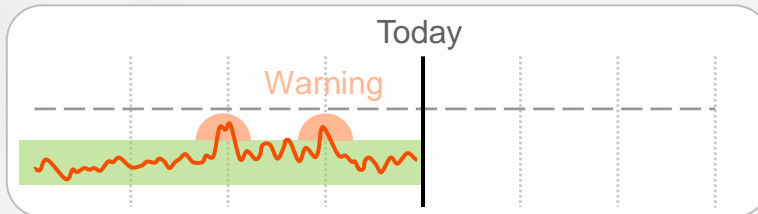

Traditional Condition Monitoring

No view on the future

- Continue operation until alarm threshold is reached
- Schedule maintenance by experience

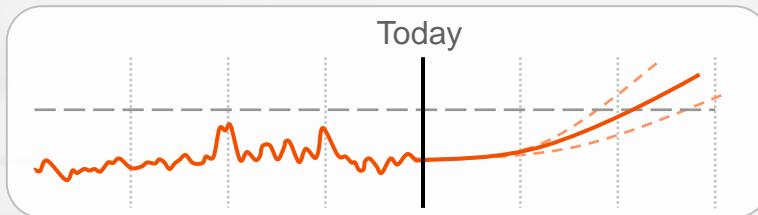

Predictive Analytics

Early warnings

- Operate under closer surveillance, prepare for possible alarm
- Schedule maintenance by experience with improved advance notice

CASSANTEC Prognostics

Real tangible foresight and early warnings

- Actively manage operation
- Actively manage maintenance schedule based on prognosis
